

Dheeraj Shrivastav | Smart Contract Engineer

▪ [Email](#) ▪ [Github](#) ▪ [LinkedIn](#) ▪ [Twitter](#) ▪ [Blog](#) ▪ [Telegram](#) ▪ India (+5:30 UTC)

With a strong foundation in **software development** and a dedicated focus on **blockchain since 2022**, I specialize in building **production-grade smart contract infrastructure** for decentralized applications.

My expertise encompasses creating and managing production-grade smart contract infrastructures for DeFi applications, rebase tokens, proxy contracts, dynamic NFTs, and cross-chain transfers.

I am deeply committed to architecture, security, and delivering reliable, high-impact decentralized solutions.

Key Achievements

- Engineered and deployed a cross-chain rebase token protocol, enabling seamless asset movement and synchronized supply adjustments across multiple EVM chains for enhanced capital efficiency.
- Designed and implemented a DeFi protocol as an algorithmic stablecoin, focusing on a robust peg mechanism and integrated on-chain governance for stability management.
- **Architected and Launched Latch**, a Web3 game featuring sophisticated on-chain asset management, securing a top-tier **Web3 Hackathon win** for innovation and technical execution.
- Engineered the core system for **Dapp Drop**, a Web3 user acquisition platform that employed multi-step on-chain and social verification to effectively **filter out bot traffic**, ensuring high-quality, authentic user engagement for decentralized projects.

Technical Skills

- **Programming Languages:** Solidity (2 years), Typescript (3 years), Javascript (3 year), Python (1 year)
- **Development:** Forge, Anvil, Cast, Hardhat, NodeJs, EthersJs, Web3Js, ReactJs.
- **Security analysis:** Foundry Fuzz

Experience

Freelance Backend Developer | October 2023– Present

- Digitally Transformed client operations by architecting and developing custom, full-stack web applications and internal tools, replacing inefficient manual processes with automated solutions.
- Delivered end-to-end solutions using scalable backend technologies (Node.js), ensuring systems were secure, maintainable, and directly fulfilled specific business requirements for optimization and reporting.
- Optimized data management for clients by designing and implementing robust PostgreSQL database schemas, enhancing data integrity and significantly improving reporting and data access speed.
- Managed the full project lifecycle, from requirement gathering to production deployment, maintaining a 100% success rate in meeting client needs and facilitating smooth digital transitions for small and medium-sized businesses.

Projects

[Latch \(Multiplayer On-Chain Game\)](#) | Solidity, hardhat, WebSocket, Etherjs, Reown | December 2024 – January 2025

- Designed and architected the core smart contract system for a multiplayer on-chain game, implementing complex decentralized state management and secure, immutable on-chain asset ownership.
- Led full-cycle Solidity development for critical game logic, prioritizing security and gas efficiency to ensure low friction and transaction costs for a high volume of player interactions.
- Successfully prototyped and deployed the end-to-end dApp within a tight window, resulting in a top-tier Web3 Hackathon win that validated the project's technical innovation and execution quality.

[DappDrop \(Web3 Airdrop Automation Platform\)](#) | Solidity, Foundry, ERC721, openzeppelin | July 2025 – Present

- Designed and developed a **cross-chain** SaaS DApp streamlining airdrop discovery, eligibility, and automated claiming for users, increasing claim success rates by 50%.
- Engineered **auto-verification** for on-chain and Web2 (X/Twitter, Discord) tasks, reducing manual review time by 80%.
- Implemented secure, scalable authentication with OAuth and JWT for user wallet and social account linking, improving sign-up conversion.

[TicketChain \(Decentralized Ticketing Platform\)](#) | Solidity, Hardhat, Chainlink, Alchemy, Prisma | June 2025 – June 2025

- Engineered core **ERC-721** Smart Contracts for immutable ticket issuance, eliminating counterfeiting and enabling secure, verifiable true ownership transfer (NFT-based ticketing).
- Implemented **on-chain royalty** logic to automate and enforce transparent revenue streams for event organizers, guaranteeing programmatic payout on secondary market resales.
- Utilized **Chainlink services** (e.g., VRF/Automation) for verifiable randomness or event triggers, enhancing the platform's security and decentralized features.

Hackathons

Shapecraft - Multiple Bounty Winner | December 2024 | [Live Link](#) | [Github repo](#)

- Developed a real-time multiplayer blockchain-based game for 500+ concurrent users.

VisioPolytech-2nd winner | [Live Link](#) | [Github repo](#)

- Architected and deployed the core **ERC-721** smart contract protocol for secure ticket issuance, implementing custom logic to eliminate counterfeiting and ensure true, immutable ownership for users.

Sunhack – Finalist | August 2025 | [Github repo](#)

- A blockchain-based transparent and tamper-proof land registry system with smart contracts for ownership registration and transfer, IPFS document storage, and GIS-enabled public property verification.

Education

Professional Qualifications and Certifications

- Advanced Smart Contract Development with Foundry by Cyfrin Updraft, 2025
 - Mastered advanced Solidity smart contract engineering and testing techniques using Foundry, taught by industry experts from Cyfrin.
 - Developed and audited advanced smart contracts including stablecoins, DAOs, and DeFi protocols.
 - Implemented property-based testing (fuzzing), manual and formal verification, and advanced Foundry tools (Forge, Anvil).
 - Applied secure design patterns (minimal proxies, upgradable contracts, Yul/Assembly), and deep EVM-level debugging.
 - Integrated Chainlink oracles and off-chain data; optimized contract security and gas usage.
- 100xDevs 0 to 100 Dev Cohort by Harkirat Singh, 2024
 - Completed advanced training in MERN stack, DevOps tools, and scalable system design for production-ready apps.
 - Built and deployed full-stack projects using modern dev workflows (CI/CD, Docker, AWS).
 - Gained practical experience in system design, backend optimization, and cloud-native deployments

Academic Education

- B.Tech in Computer science Engineering (AIML), DIMS, Maharashtra, India (2023 - 2026)
- Diploma in Computer science Engineering, MGM's Polytechnic, Maharashtra, India (2020 - 2023)
