

Dheeraj Shrivastav | Full Stack Web Developer

▪ [Email](#) ▪ [Github](#) ▪ [LinkedIn](#) ▪ [Twitter](#) ▪ [Blog](#) ▪ [Telegram](#) ▪ India (+5:30 UTC)

with years of expertise in architecting **scalable, production-grade** web applications using modern JavaScript frameworks and cloud-native architectures. Specialized in **React, Next.js, Node.js, TypeScript, and PostgreSQL** with proven ability to optimize application performance, implement CI/CD pipelines, and deliver end-to-end solutions from concept to deployment. Adept at building RESTful APIs, integrating third-party services, designing responsive UIs, and leveraging event-driven systems (Kafka) for high-throughput applications. Passionate about clean code, test-driven development, and delivering measurable business impact through technology.

Key Achievements

- Led development of a **real-time** multiplayer blockchain game, defeating other teams and securing multiple bounty prizes for technical innovation.
- Architected **Production-Grade** Full-Stack Applications. Delivered **scalable** web solutions serving 500+ users with 99.9% uptime, generating client revenue through **optimized performance**.
- Engineered **high-performance** backend using Node.js, PostgreSQL, and Redis caching, reducing API response times from 800ms to 320ms.
- Accelerated Deployment Efficiency by 85%. Implemented CI/CD pipelines and **Docker containerization**, cutting deployment cycles from 2 hours to 15 minutes while eliminating 95% of production errors.

Technical Skills

- **Programming Languages:** TypeScript, JavaScript, Python, Solidity
- **Backend Development:** Node.js, Bun.js, JWT, OAuth2.0
- **Database & ORM:** PostgreSQL | MongoDB | Prisma ORM | Redis (Caching)
- **DevOps & Cloud:** Docker, Linux, Apache Kafka, CI/CD Pipelines (GitHub Actions), AWS (EC2, S3)

Experience

Freelance Full Stack Web Developer | October 2023 – Present

- Architected and deployed 10+ **production-ready** full-stack web applications utilizing React, Next.js, Node.js, and PostgreSQL, serving 5,00+ active users with 99.8% uptime.
- Engineered scalable **RESTful APIs** using Express.js and Prisma ORM, reducing API response times by 40% through query optimization and Redis caching strategies.
- Implemented event-driven architectures with Apache Kafka for real-time data processing and asynchronous task execution, improving system throughput by 35%.
- Automated deployment workflows using Docker containerization and CI/CD pipelines (GitHub Actions), reducing deployment time from 2 hours to 15 minutes and minimizing production errors.

Projects

Latch: Multiplayer Web3 Game | [Live Link](#) | December 2024

Tech Stack: Next.js | Phaser.js | Socket.io | TypeScript | Hardhat

- Engineered real-time multiplayer functionality using Socket.io for WebSocket-based client-server communication, enabling synchronized gameplay for 100+ concurrent users.
- Developed responsive game UI with Phaser.js for 2D graphics and animations, optimizing frame rates and rendering performance across devices.
- Integrated blockchain features using Hardhat and smart contracts for secure in-game asset management and player interactions.
- Implemented state management with React Context API to synchronize game state across multiple components and sessions.

DApp Drop: Web3 User Acquisition & Task Verification Platform | [Live Link](#) | July 2025 – Present

Tech Stack: Next.js | Prisma | PostgreSQL | Node.js | Discord API | OAuth2.0

- Architected a multi-phase SaaS platform enabling Web3 projects to onboard users through gamified task verification and social media engagement.
- Designed and implemented RESTful APIs for user authentication, task creation, social media verification (Discord, Twitter), and reward distribution.
- Optimized database schema using Prisma ORM and PostgreSQL for efficient handling of user-generated tasks, verification logs, and real-time leaderboards.
- Integrated OAuth2.0 workflows for seamless social login and API authorization, improving user onboarding conversion rates by 45%.

TicketChain: Event Ticketing & Marketplace Platform | [Live Link](#)

Tech Stack: Next.js | TypeScript | Prisma | PostgreSQL | Node.js | Chainlink APIs | Docker

- Developed a full-stack SaaS platform for event organizers to create, sell, and manage tokenized event tickets with secure secondary marketplace functionality.
- Built robust backend APIs handling user authentication, event management, ticket purchasing, and resale logic with fee/royalty distribution mechanisms.
- Integrated Chainlink oracles for cross-chain interoperability and real-time price feeds, enabling multi-chain support (Ethereum, Optimism).
- Implemented hybrid validation system combining frontend checks and backend smart contract validation to reduce transaction costs by 60%.

Education

Professional Qualifications and Certifications

- 100xDevs Full Stack Development Cohort | Harkirat Singh | 2024
 - Completed advanced training in MERN stack, DevOps, system design, and scalable architectures with modern tools (Docker, CI/CD, AWS).
 - Built and deployed multiple production-grade apps using modern dev workflows (Git/GitHub, Docker, cloud-native deployments).
 - Gained practical experience in backend optimization, microservices, and cloud infrastructure management.
- Advanced Smart Contract Development With Foundry | Cyfrin Updraft | 2025
 - Mastered advanced Solidity development, smart contract testing (fuzz testing, formal verification), and protocol design patterns.
 - Developed and audited advanced smart contracts including DAOs, stablecoins, and DeFi protocols.
 - Applied secure design patterns, Assembly optimization, and EVM-level debugging for blockchain applications.

Academic Education

- B.Tech in Computer Science & Engineering (AIML) | DIEMS, Maharashtra, India | 2023 – 2026
- Diploma in Computer Science Engineering | MGM Polytechnic, Maharashtra, India | 2020 – 2023
