Dheeraj Shrivastav

Software Engineer | Product & Backend | TypeScript, Node.js, PostgreSQL

Maharashtra, India | dheerajshrivastav08@gmail.com | dheerajshrivastav.me | github.com/DheerajShrivastav | linkedin.com/in/dheerajshrivastav

SUMMARY

Software engineer shipping product and backend systems in TypeScript and Node.js. At work: on the team that shipped a multilingual voice agent on Gemini Live (manual physician intervention down 65%); built an automation pipeline and internal AI agents. Building DappDrop, a Sybil-resistant on-chain rewards protocol (Sepolia, pre-launch).

EXPERIENCE

Product Developer, Seragen Biotherapeutics — Jun 2026 - Present

Gemini Live, Claude, Node.js, TypeScript, WebSockets, Azure

- Part of the team that shipped a real-time, multilingual voice AI agent on Gemini Live (native speech-to-speech) for patients and doctors, with strict guardrails over a curated dataset; cut manual physician intervention by 65%.
- Designed a doctor-in-the-loop flow: AI drafts personalized patient reports and doctors approve them before delivery.
- Consolidated the team's separate tools into a single automated pipeline, removing manual hand-offs between steps.
- Built internal AI agents that give staff on-demand recommendations instead of waiting on a senior.

Software Engineer Intern, Scalefull Technologies — Feb 2026 - May 2026

- Improved backend performance by ~25% with caching layers and REST API refactors (Node.js, TypeScript, NestJS).
- Designed and migrated PostgreSQL schemas to speed up queries on high-concurrency read paths.
- Raised test coverage on core microservices to ~90% and standardized API documentation with Swagger/OpenAPI.

Freelance Software Developer, Self-employed — Oct 2023 - Sep 2025

- Built and deployed ~10 client web apps (React, Next.js, Node.js, PostgreSQL), used by an estimated ~500 people.
- Roughly halved API response times with Redis caching and query optimization in Express/Prisma services.
- Set up Docker-based CI/CD with GitHub Actions, replacing manual deploys.

PROJECTS

DappDrop: Sybil-resistant on-chain rewards protocol (founder) — Jul 2025 - Present

Solidity, Foundry, EIP-712, Merkle proofs, Next.js, Prisma, PostgreSQL, The Graph. Pre-launch, on Sepolia testnet.

- Designed the protocol and security model: escrowed rewards, Merkle settlement with a 24h dispute window, fallback settler.
- Kept the core contract under the 24 KB EIP-170 limit by moving reward, NFT and fee logic into satellite modules.
- 240 unit + 26 invariant tests; an invariant caught a high-severity cross-campaign fund drain on the dev branch, pre-launch.
- Built the off-chain path: EIP-712 signer, SIWE auth, The Graph subgraph with RPC fallback, keeper, gasless relayer.
- AI coding agents land code only through a gate I run: invariant fuzzing, Slither/Aderyn, then my review.

AWS Deploy AI: natural-language AWS deployments (solo) — 2025

TypeScript, MCP, AWS Bedrock (Claude), S3, CloudFront, Lambda, GitHub OAuth, Next.js

- MCP server + web app that analyzes a GitHub repo with an LLM and deploys it to AWS from a plain-English request.

OPEN SOURCE

wespreadjam/jam-nodes: open-source workflow-automation framework (the project has 200+ GitHub stars) — Mar 2026

- 5 merged contributions: Dev.to integration (27 tests), WordPress integration, webhook trigger, fixed/sliding-window rate limiter, DataForSEO ops.

SKILLS

Languages: TypeScript, JavaScript, Solidity, SQL

Backend: Node.js, NestJS, Express, Bun, REST, Socket.io, Prisma, PostgreSQL, Redis, OAuth, SIWE

AI: Gemini Live, Claude, AWS Bedrock, Groq, MCP, voice agents, guardrails

Web3: Foundry (unit, fuzz, invariant), Slither, Aderyn, ethers.js, viem, EIP-712, Merkle proofs, The Graph

Frontend: React, Next.js, Tailwind CSS

Infra: Docker, GitHub Actions, AWS (S3, CloudFront, Lambda, Bedrock), Azure, Linux, Vercel

EDUCATION

B.Tech, Computer Science & Engineering (AI & ML), DIEMS, Maharashtra

Diploma, Computer Science & Engineering, MGM Polytechnic, Maharashtra
